

IPL Laser Photo Rejuvenation

How it works

IPL stands for intense pulsed light, which is a safe, nonsurgical laser service. IPL laser photo rejuvenation technology is used to reduce the appearance of sun damage, rosacea, melasma, broken blood vessels, and even fine lines.

How to Prepare

- 1** Avoid using Accutane for 6 months before your session. Additionally, avoid Retin-A, retinol, glycolic acid, salicylic acid, and any form of vitamin A for 10 days prior to the session.
- 2** Avoid sun exposure and self-tanning products for 2 weeks prior to your session. Ensure the area being treated is free of sunburn, eczema, or inflammation.
- 3** Make sure not to use blood-thinning OTC medications (e.g., Aleve, ibuprofen, aspirin) for 24 hours before your treatment.
- 4** If you wear contacts, please remove them prior to your treatment.

What to Expect

At your session, we'll cleanse your skin and review your goals. Then, we'll apply ultrasound gel to the skin prior to treatment to alleviate discomfort. Next, we'll administer small flashes of broad-spectrum intense pulsed light (IPL) to warm the skin, stimulate the body's natural healing process, and boost collagen and elastin production. The advanced, real-time cooling system in the Venus Versa technology ensures your skin is always protected from the heat so that you can enjoy a spa-like experience.

It will take about 30-60 minutes depending on the size of the area.

After Your Session

Be sure to use SPF 30+ for at least 30 days after your treatment and avoid Accutane for 6 months after treatment.

Results & Maintenance

Most individuals require a series of 3 treatments over the course of 3 months to correct the area of concern.

IPL Laser Photo Rejuvenation Pricing
