

Skin Resurfacing Treatment

How it works

Skin resurfacing works by dispersing energy through electrode pins, which in turn gets your cells to do the work, renewing the skin. It encourages a healing reaction that boosts the skin's natural collagen and elastin production.

How to Prepare

For best results, avoid sun exposure and self-tanning products for 2 weeks prior to your session. Additionally, avoid Retin-A, retinol, glycolic acid, salicylic acid, and any form of vitamin A for 3-5 days prior to the session. If you wear contacts, please remove them before your treatment. Make sure to book a free consultation to discuss goals and determine if the treatment is right for you.

What to Expect

At your session, we'll cleanse your skin and review your goals. Then, we'll administer energy deep into the skin through tiny electrode pins. This will create micro-dermal wounds with low impact on the epi-

dermis to stimulate the skin's natural collagen and elastin production, resulting in complete skin renewal. Since the wounds are so small, the treatment is comfortable yet effective. It will take about 30-60 minutes depending on the size of the area.

After Your Session

Your skin will experience mild redness for about 24 hours after treatment. During this time, don't use any products on the treatment. Use SPF 30+ for at least 30 days afterward.

Results & Maintenance

Most patients require 3 treatments over a 3-month period. Depending on the severity of the condition, additional treatments may be added to further improve the results.

Skin Resurfacing Treatment Pricing

Face, Neck, or Chest

60 minutes for **\$500**

Package of 3 for **\$1,275**

Face and Neck
