

Laser Acne Reduction

How it works

Laser acne reduction uses intense pulsed light (IPL) technology to target inflammation deep within the layers of skin and destroy bacteria, leaving behind the beautiful complexion that has been there all along.

How to Prepare

- 1.** Avoid sun exposure and self-tanning products for 2 weeks before your session. Ensure the area being treated is free of sunburn, eczema, and inflammation.
- 2.** Stop using Accutane for 6 months before your treatment. Additionally, avoid using Retin-A, retinol, glycolic acid, salicylic acid, and any form of vitamin A for 10 days prior to the session.
- 3.** Do not use blood-thinning OTC medications (e.g., Aleve, ibuprofen, aspirin) for 24 hours before your treatment.
- 4.** If you wear contacts, you'll need to remove them before your treatment.

What to Expect

At your session, we'll cleanse your skin and review your goals. Then, we'll administer small flashes of broad-spectrum intense pulsed light (IPL), which stimulates the body's natural healing process and boosts collagen and elastin production while warming the skin. The advanced, real-time cooling system in the Venus Versa device we

use ensures your skin is always protected from the heat so that you can enjoy a spa-like experience. The session will take about 30-60 minutes, depending on the size of the area being treated.

After Your Session

Use SPF 30+ for at least 30 days after your treatment and avoid Accutane for 6 months after your treatment.

Results & Maintenance

Most patients require 1-2 treatments per week for 4-8 weeks. While bacteria, environmental factors, and sebum production are unavoidable, results typically last for about a year.

Yearly laser acne reduction sessions for maintenance may be required.

Laser Acne Reduction Pricing

Laser acne reduction can be used on the following areas:
Face, Neck, Back, Shoulders, Chest

Face or Neck

45 minutes for **\$125**

Packages
