

Laser Services

Laser Hair Removal | IPL Photo Rejuvenation | Acne Reduction

At Ethos MedSpa, we get it. You want convenience and affordability in your beauty routine. But you feel like you've tried everything, and you're tired of wasting so much time and money without seeing results.

That's why we've invested in the latest technology to help you rejuvenate your skin and remove hair for good. The Venus Versa uses the latest intense pulsed light (IPL) technology to solve the most common skin and hair issues without surgery.

With our 3 laser services solution we can...

- Destroy hair so you don't have to shave or wax anymore
- Improve the signs of sun damage, rosacea, broken blood vessels, and fine lines
- Destroy the bacteria under the skin that leads to acne.

... you can stop the endless cycle of trying new products only to be disappointed. With the Venus Versa, we can provide 3 services that will get long-lasting results quickly.

One Machine, Three Services

All laser services are delivered via the Venus Versa, which is a multi-treatment system that uses intense pulsed light (IPL) technology. IPL works to improve sun damage, rosacea, broken blood vessels, and fine lines. It also destroys bacteria under the skin that would normally lead to acne, and it can stop unwanted hair growth by targeting the hair follicles.

The customization of the Venus Versa allows us to deliver energy to deeper layers of the skin and destroy follicles. The light from the IPL machine creates heat that corrects imperfections in the tissue without damaging it.

The Venus Versa uses a cooling system to keep your skin safe throughout the treatment.

These services are quick and comfortable and have little downtime.

Laser Hair Removal Treatment

How it Works

Laser hair removal works by using a concentrated beam of light to stop unwanted hair growth. This light (intense pulsed light, or IPL) is absorbed by the pigment in the hair and converted into heat, which damages your hair follicles to ultimately stop or delay the chance of hair growth in the future.

We use the latest Venus Versa technology to remove unwanted hair safely and effectively.

How to Prepare

- 1** Laser hair removal treatment requires a contrast in color from hair to skin. Avoid sun exposure for weeks prior to your session including tanning beds and self-tanning products.
- 2** Shave the area 24-48 hours prior to treatment. Avoid removing hair at the root for 6 weeks (i.e., tweezing, waxing, plucking).
- 3** Stop bleaching or using depilatory agents for 4 weeks.

What to Expect

We'll start by cleansing your skin and reviewing your goals. If you wear contacts, you will be asked to remove them. Then, we'll use the intense pulsed light (IPL) from the Venus Versa to target your hair follicles. With the advanced, real-time cooling system in the Venus Versa, your skin is always protected from the heat and you can enjoy a more comfortable treatment.

It will take about 15-60 minutes depending on the areas we are working on.

After Your Session

Avoid exercising or anything that causes your body to heat up for 24 hours after your session and avoid hot water and saunas for 3 days. Use a gentle exfoliator one week after your treatment to slough off the dead hairs.

Results & Maintenance

Most individuals require 3-6 treatments performed 6 weeks apart on the face and 4-8 weeks apart on the body. Those with a high skin-color contrast report permanent hair loss after completing their laser hair removal treatment sessions. Some people require maintenance treatments once a year.

Laser Hair Removal Pricing

Laser hair removal can be used on various areas of the body, and the purchase **includes unlimited treatments for life!**

X-Small Area

- Men's Full Bikini

Large Area

\$3,700

- Full Back
- Full Arms
- Full Legs
- Men's Full Brazilian (Customizable)

IPL Laser Photo Rejuvenation

How it works

IPL stands for intense pulsed light, which is a safe, nonsurgical laser service. IPL laser photo rejuvenation technology is used to reduce the appearance of sun damage, rosacea, melasma, broken blood vessels, and even fine lines.

How to Prepare

- 1** Avoid using Accutane for 6 months before your session. Additionally, avoid Retin-A, retinol, glycolic acid, salicylic acid, and any form of vitamin A for 10 days prior to the session.
- 2** Avoid sun exposure and self-tanning products for 2 weeks prior to your session. Ensure the area being treated is free of sunburn, eczema, or inflammation.
- 3** Make sure not to use blood-thinning OTC medications (e.g., Aleve, ibuprofen, aspirin) for 24 hours before your treatment.
- 4** If you wear contacts, please remove them prior to your treatment.

After Your Session

Be sure to use SPF 30+ for at least 30 days after your treatment and avoid Accutane for 6 months after treatment.

What to Expect

At your session, we'll cleanse your skin and review your goals. Then, we'll apply ultrasound gel to the skin prior to treatment to alleviate discomfort. Next, we'll administer small flashes of broad-spectrum intense pulsed light (IPL) to warm the skin, stimulate the body's natural healing process, and boost collagen and elastin production. The advanced, real-time cooling system in the Venus Versa technology ensures your skin is always protected from the heat so that you can enjoy a spa-like experience.

It will take about 30-60 minutes depending on the size of the area.

Results & Maintenance

Most individuals require a series of 3 treatments over the course of 3 months to correct the area of concern.

Full Legs

****ONE AREA PER PURCHASE. PACKAGE INCLUDES 1X A MONTH FOR 3 MONTHS**

Laser Acne Reduction

How it works

Laser acne reduction uses intense pulsed light (IPL) technology to target inflammation deep within the layers of skin and destroy bacteria, leaving behind the beautiful complexion that has been there all along.

How to Prepare

- 1** Avoid sun exposure and self-tanning products for 2 weeks before your session. Ensure the area being treated is free of sunburn, eczema, and inflammation.
- 2** Stop using Accutane for 6 months before your treatment. Additionally, avoid using Retin-A, retinol, glycolic acid, salicylic acid, and any form of vitamin A for 10 days prior to the session.
- 3** Do not use blood-thinning OTC medications (e.g., Aleve, ibuprofen, aspirin) for 24 hours before your treatment.
- 4** If you wear contacts, you'll need to remove them before your treatment.

What to Expect

At your session, we'll cleanse your skin and review your goals. Then, we'll administer small flashes of broad-spectrum intense pulsed light (IPL), which stimulates the body's natural healing process and boosts

collagen and elastin production while warming the skin. The advanced, real-time cooling system in the Venus Versa device we use ensures your skin is always protected from the heat so that you can enjoy a spa-like experience. The session will take about 30-60 minutes, depending on the size of the area being treated.

After Your Session

Use SPF 30+ for at least 30 days after your treatment and avoid Accutane for 6 months after your treatment.

Results & Maintenance

Most patients require 1-2 treatments per week for 4-8 weeks. While bacteria, environmental factors, and sebum production are unavoidable, results typically last for about a year.

Yearly laser acne reduction sessions for maintenance may be required.

Laser Acne Reduction Pricing

Laser acne reduction can be used on the following areas: Face, Neck, Back, Shoulders, Chest

Face or Neck

45 minutes for **\$125**

Packages
