

Chemical Peel Treatment

How It Works

At Ethos MedSpa, we apply a medical-grade chemical peel treatment to gently remove the top layers of the skin, allowing a fresher and more radiant complexion to shine through. Our facial solution penetrates the surface to reveal smoother skin. It is a safe and easy process that comes in different intensities for your goals.

What to Expect

At your session, we'll review your goals and cleanse your skin. Next, we'll proceed with the medical-grade chemical peel treatment that is right for your skin (either the iS CLINICAL Prodigy Peel "P2" System or the iS CLINICAL Prodigy Peel Pro "P3" System) based on the Fitzpatrick Scale of Skin Type. This involves applying the peel solution and a powerful booster to enhance the benefits. We'll apply cool compresses to your skin to help with discomfort. You might experience mild stinging while the solution is on your skin and for 20 minutes afterward. Overall, the process will take about 45-60 minutes.

Results & Maintenance

For optimal results, we recommend getting a medical-grade chemical peel every 4 to 6 weeks.

How to Prepare

To get the best results from your chemical peel, avoid the following one week prior to treatment: waxing, laser hair removal, depilatory creams, Retin-A, retinol, and harsh exfoliation products. Additionally, you must not undergo any Botox or dermal filler treatment within 48 hours of your peel.

After Your Session

After your chemical peel, it is normal to experience dryness and peeling as the top layers of skin work their way off your face, which will start within 2 days of treatment. During this time, don't pick or peel the skin. Keep your skin well moisturized, wear sunscreen, and refrain from using any chemical or manual exfoliants. Don't exercise, sweat, or allow exposure to steam for up to 48 hours after your treatment. Peeling should stop after 10 days. It may take up to 28 days to see full results due to natural exfoliation and recovery.

Chemical Peel Treatment Pricing

Our experienced team will help you choose the right chemical peel from the options we have available:
